

Manage Your NetSuite Data Securely and Seamlessly in Excel in Real Time

CloudExtend Excel for NetSuite (formerly SmartClient) users can access and edit NetSuite data directly from within Excel, in real time and with a single click. Take full advantage of Excel's data manipulation functions to retrieve, update, add and delete NetSuite data from multiple record types. Need more from the traditional CSV import/export tool for NetSuite? Try Celigo CloudExtend.

Installs in seconds from the Microsoft Office Store.

What CloudExtend Excel for NetSuite Does for You

CloudExtend allows you to update multiple NetSuite records in seconds.

Put an end to having to navigate between Excel and NetSuite to see a list of valid values.

Work from anywhere. Sign in to CloudExtend and all of your customizations and templates are immediately available.

Eliminate the hassle of exporting search results to CSV files. Do it all in Excel with the CloudExtend Excel data filter or leverage your own NetSuite saved searches.

NetSuite admins can rest easy knowing that roles and permissions are enforced by CloudExtend.

Let users choose the computer and OS they want

Know that your data is valid in advance. End the vicious cycle of waiting for CSV uploads to run, hoping for the best.

Use your existing spreadsheets with complex models and formulas to update data into NetSuite
